Accelerate. Adapt. Act.

SAP Inside Track Belgium | September 23, 2023

The Edge Integration Cell

Dimitri Sannen

Integration Unit Lead

Objectives

What you should remember from this session

- Understand the **need** for the Edge Integration Cell
- Get a clear view on the **use cases**

Table of contents

- Integration history
- The bigger picture
- Look and feel
- Key takeaways
- Q&A

integration history

evolution & milestones

Key integration dates

Exchange Infrastructure
2002

Classical dual stack
First mature version was 3.0
Successor of the SAP Business Connector

Process Integration
2005

Classical dual stack, but strong adapter engine
Introduction of ccBPM
B2B add-on 1.0

2011
Process Orchestration

BPM (and BRM)
Single stack (J2EE). No more ABAP
B2B add-on 2.0

2013
HANA Cloud Integration

Continuous evolution, from HCI, over SAP HANA Cloud Platform in 2017, into the SAP Business Technology Platform Integration Suite in January 2021

Evolution

Exchange Infrastructure

Process Integration

- Natural evolution of XI
- Achieved with patching

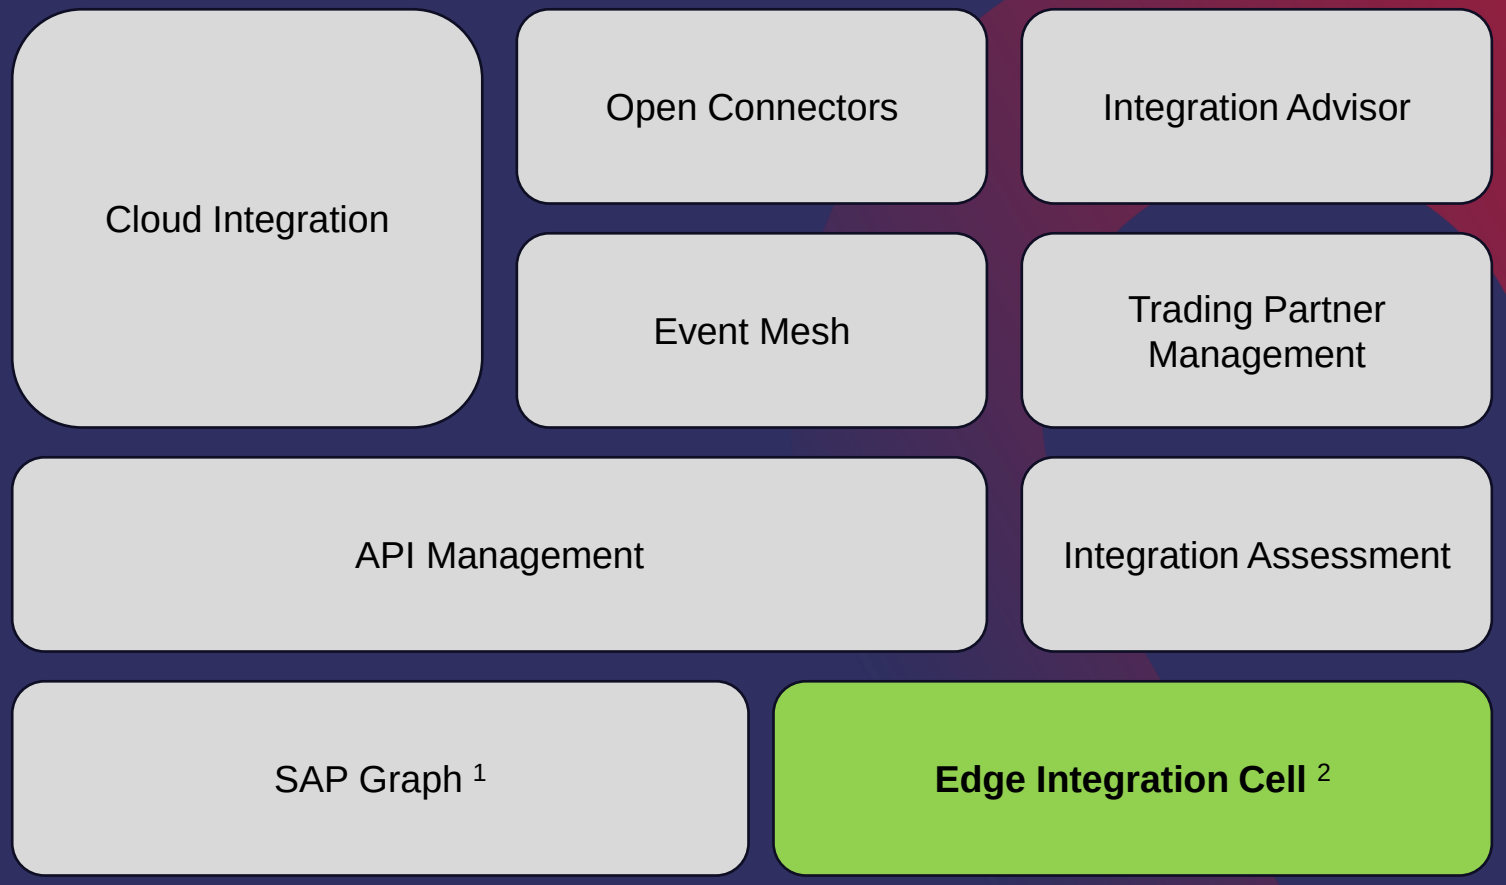
Process Orchestration

- Technological successor of PI
- Fresh installation
- Built-in migration tool
- 95% automated
- From 4 pipe steps to 1 Integrated Configuration object

BTP Integration Suite

- Completely new platform (iPaaS)
- 2 new capabilities
  - Assessment
  - Migration
- Migration complexity depends on SAP PO system
- **The new standard > 2027**

SAP BTP Integration Suite **capabilities**



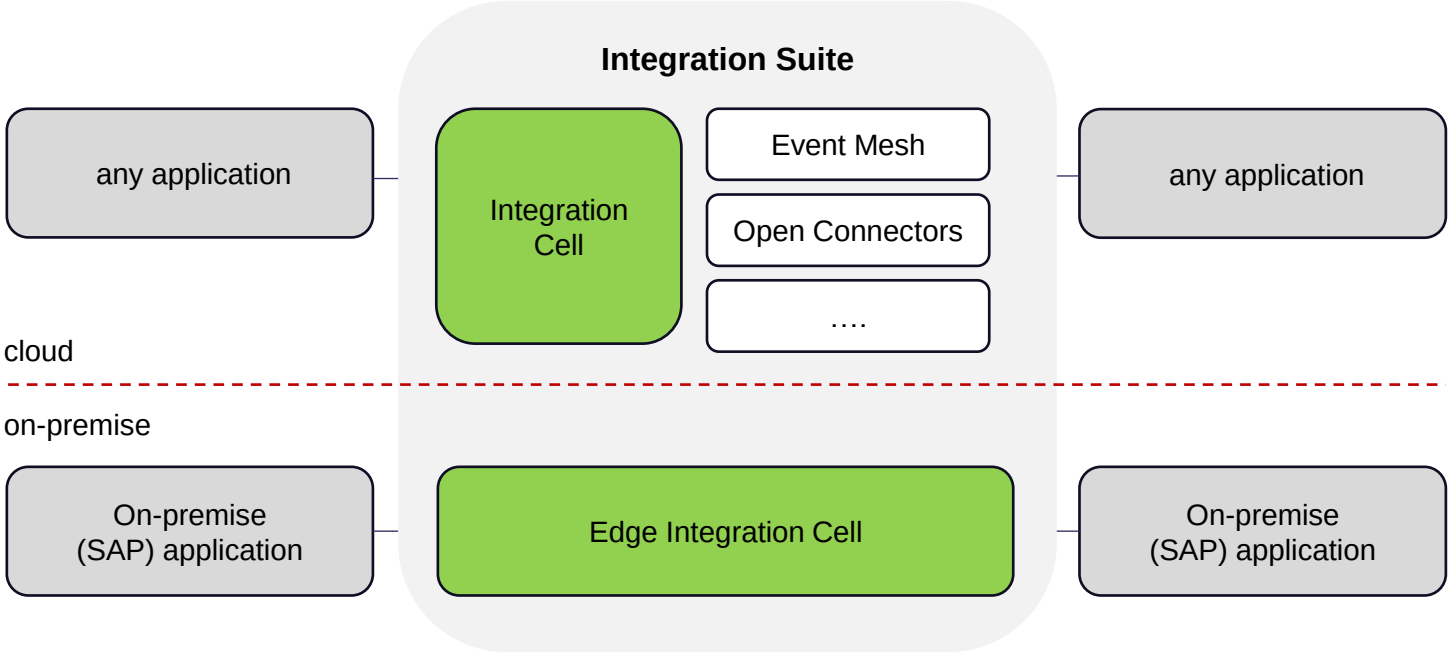
1 - Available since July 2023 2 – will be available in Q4/2023

the bigger picture

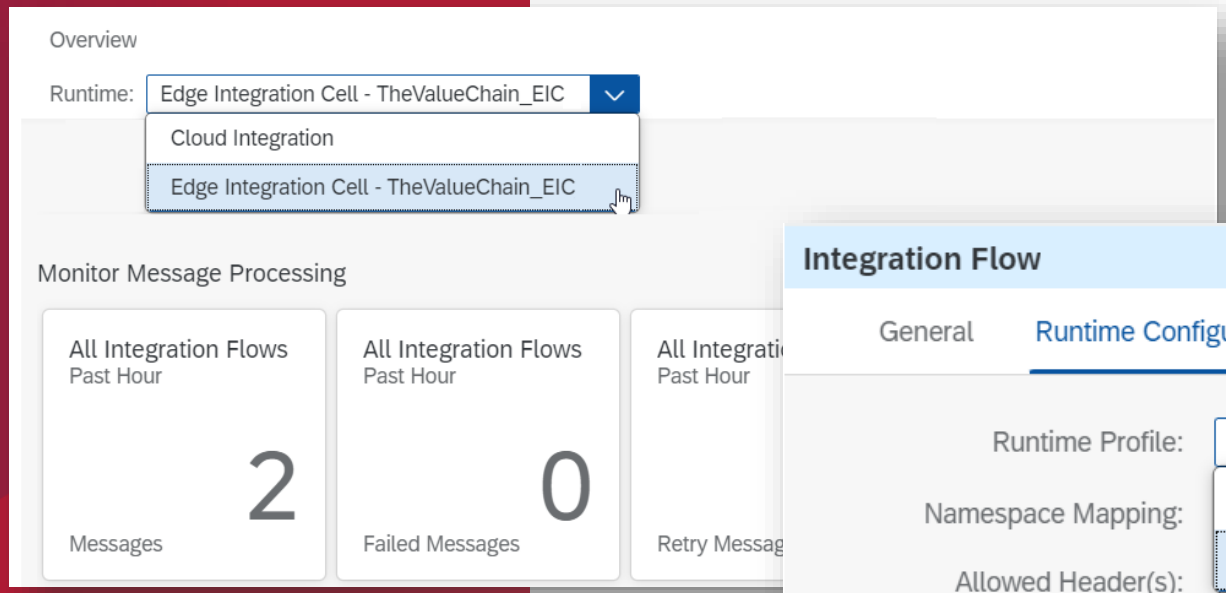
why SAP introduced the Edge Integration Cell

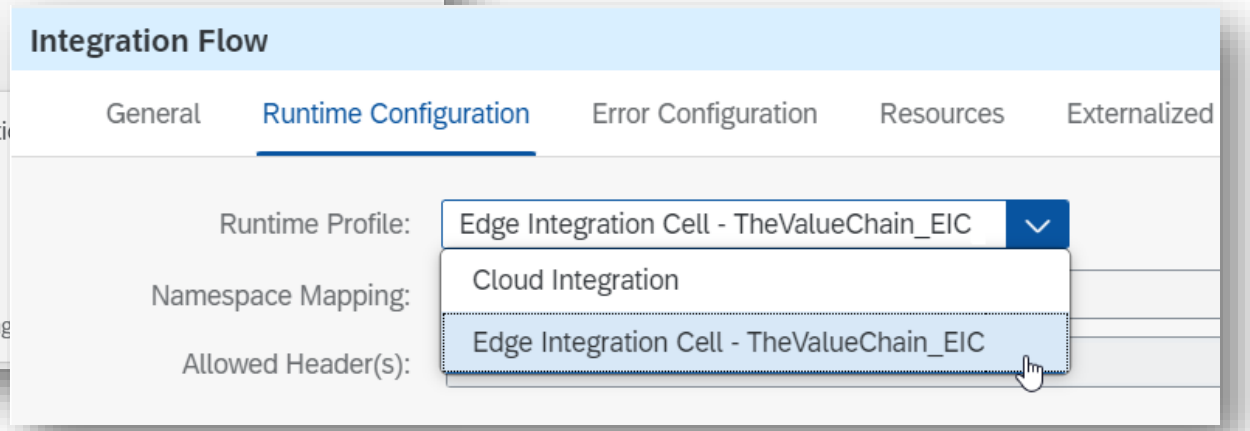
What are we now talking about?

- Neuron Edge - Hybrid Integration Runtime - Hybrid Deployment Option
- A new integration runtime
- Deploy and run your integration content in an on-premise environment
- Monitor centrally, on SAP BTP Integration Suite



What are we now talking about?





What you should know

- The Edge Integration Cell is NOT available in the Integration Suite, basic edition
- It runs on an on-premise Kubernetes[1] platform. Check availability via OSS Note 3247839
- The on-premise API Gateway was not part of the beta program and will be available directly upon general availability
- Later, an event bridge to SAP Advanced Event Mesh or non-SAP event brokers will be added (and a new Integration Suite adapter will be introduced – Solace connectivity)

Stay tuned ☺

1 - an open-source system for automating deployment, scaling, and management of containerized applications

Typical use cases

- Facilitate the migration from SAP Process Orchestration
    - Ground-to-ground integration
    - Benefit from new Integration Suite innovations
    - Deploy and run scenarios exclusively in an own on-premise environment[1]

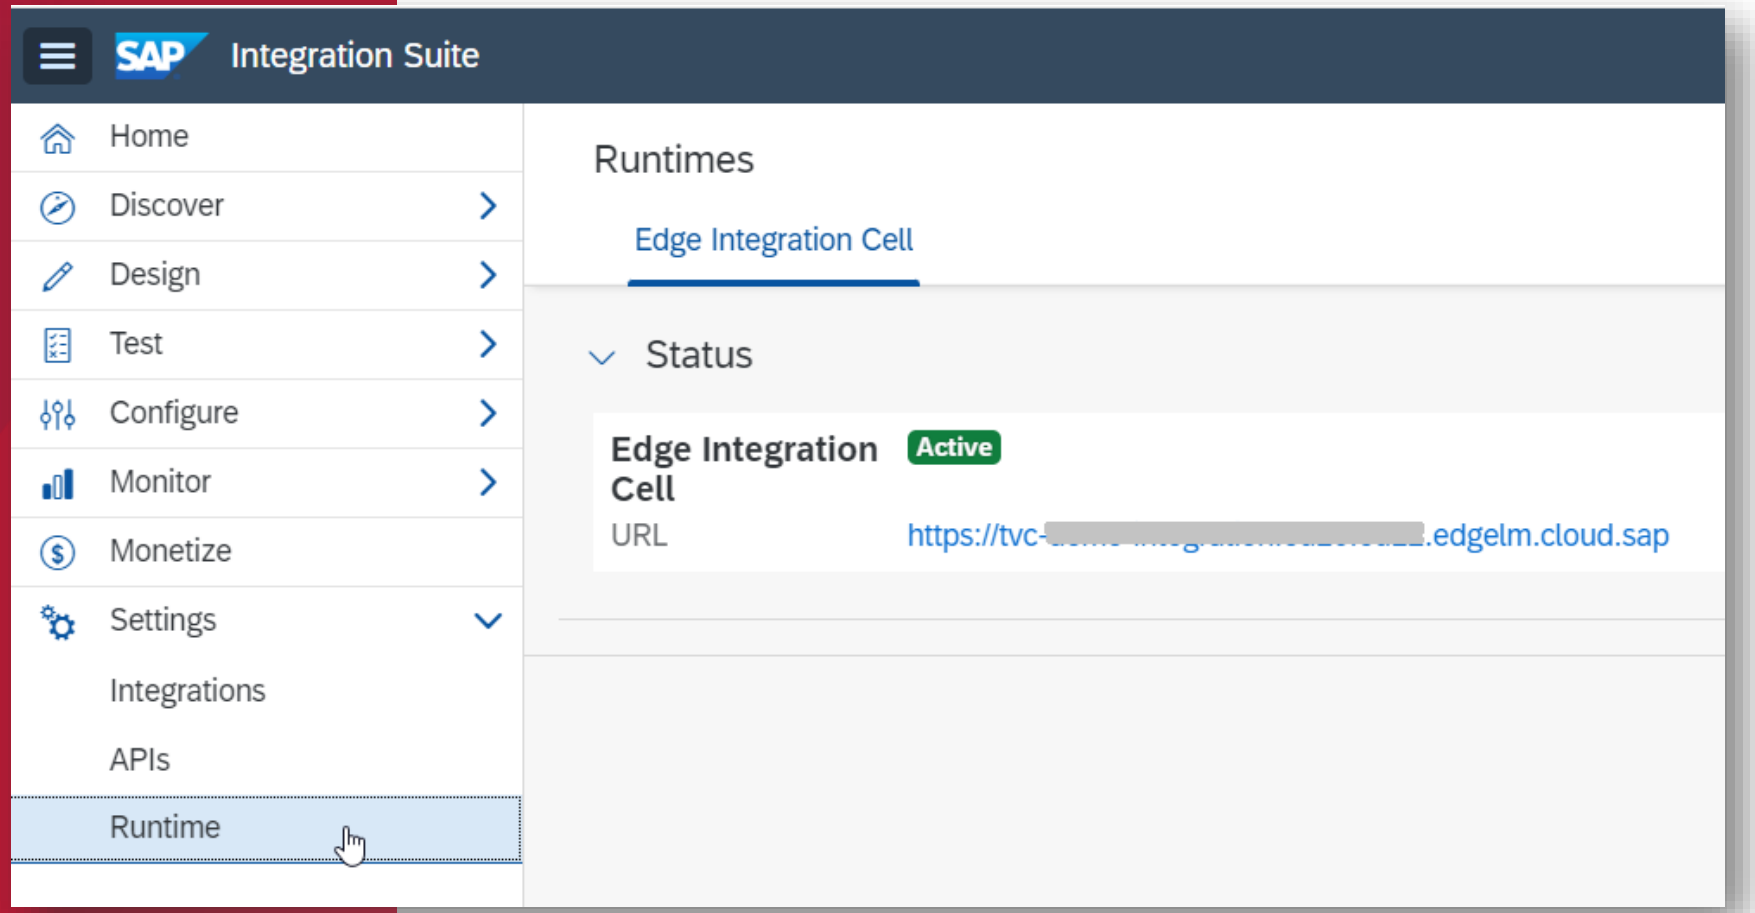
- Security and compliance
    - Manage and control sensitive data
    - Keep all inside the enterprise’s firewall
    - Legal and technical reasons - certain adapters or protocols can't be exposed in the cloud

1 – preferably very close to your SAP PO system

a look behind the scenes

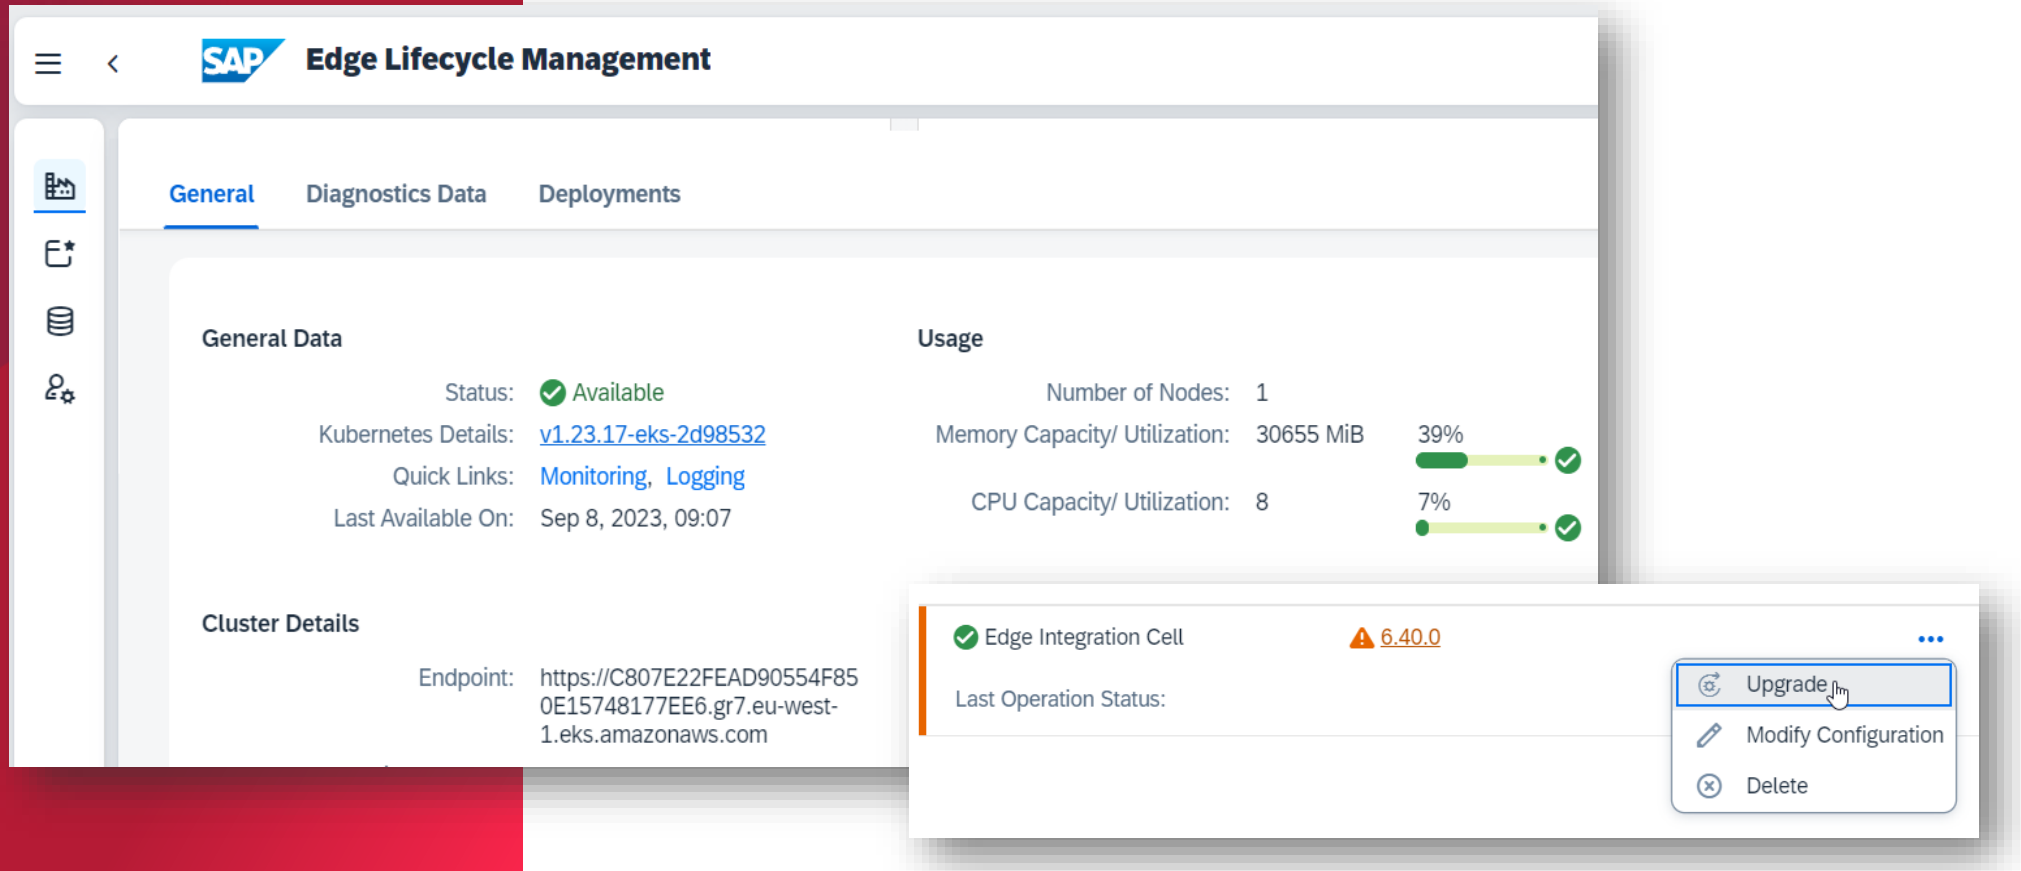
configuration and usage insights

An extra runtime will be available



Edge Lifecycle Management

- Edge node performance
- Monitoring and logging
- Upgrade



Edge Lifecycle Management

key takeaways

what you should remember from this session

Key takeaways

- The SAP BTP Integration Suite is the only way to go, as of 2027
- The Edge Integration Cell facilitates a smooth transition to the Integration Suite
- Focus on ground-to-ground integration and protecting sensitive data
- Not available in the basic edition of the Integration Suite
